CONCRETECALC™ PRO

ADVANCED YARD, FEET-INCH-FRACTION
CONCRETE CONSTRUCTION-MATH CALCULATOR

**CALCULATED
INDUSTRIES®**

FAST. ACCURATE. RELIABLE.

Model 4225

CONCRETECALC PRO

Designed for today's concrete professional, the *ConcreteCalc Pro* adds even more power to the already powerful *Construction Master* line of construction-math calculators. This calculator is so simple to use, even the novice user can easily solve dimension-related problems.

- *Solve Dimensional Math with Ease*
- *Dimensional Conversions*
- *U.S./Metric Conversions*
- *Weight/Volume Conversions*
- *Rectangular Area/Volume Calculations*
- *Block Quantity Solutions*
- *Footing Volume Calculations*
- *Instant Square-Up (Diagonal) Solutions*
- *Drop Distance Calculations*
- *Circular Area and Circumference*
- *Arc Length Calculations*
- *Calculate Stair Risers, Treads, Stringers and Inclination Angle*
- *Material Estimations*
- *Paperless Tape*

GETTING STARTED

KEY DEFINITIONS

Basic Function Keys

+ - × ÷ =

Arithmetic operation keys.

%

Percent Key – Used to find a given percentage of a number.

0 - 9 and .

Keys used for entering numbers.

Off

Off Key – Turns all power off, clearing all non-permanent registers.

On/C

On/Clear Key – Turns on power. Pressing once clears the display. Pressing twice clears all temporary values.

Conv

Convert Key – Used with the dimensional keys to convert between dimensions or with other keys to access special functions.

Stor

Store Key – Used for storing values.

Rcl

Recall Key – Recalls stored values.

Unit Keys

Yds

Yards Key – Enters or converts to *Yards*.

Feet

Feet Key – Enters or converts to *Feet* as whole

or decimal numbers.

Also used with the **Inch** and **/** keys for entering Feet-Inch values (e.g., **6 Feet 9 Inch 1 / 2**). Repeated presses during conversions toggle between Fractional and Decimal Feet.

Inch

Inch Key – Enters or converts to *Inches*. Entry can be whole or decimal numbers. Also used with the **/** key for entering fractional Inch values (e.g., **9 Inch 1 / 2**). Repeated presses during conversions toggle between Fractional and Decimal Inches.

/

Fraction Bar Key – Used to enter Fractions. Fractions can be entered as proper ($1/2$, $1/8$, $1/16$) or improper ($3/2$, $9/8$). If the denominator (bottom) is not entered, the calculator's fractional accuracy setting is automatically used.

m

Meters Key – Enters or converts to *Meters*.

Conv 7

Centimeters – Enters or converts to *Centimeters*.

Conv 9

Millimeters – Enters or

converts to *Millimeters*.

Acres – Enters or converts to *Acres*.

Conv **2**

Length, Width and Height Keys

Length

Enters Length for calculation of Area or Volume.

Width

Enters Width and calculates Area, Square-up and perimeter.

Height

Enters Height and calculates Volume, wall Area and total room Area. This is a permanent entry; stored value holds when turned off.

Arc, Circle Keys

Arc

Arc — Calculates arc Length or degree, chord Length, segment Area, pie slice Area and segment rise.

Circ

Circle — Enters diameter and calculates circle Area and circumference.

Conv **Arc**

Radius — Enters or calculates circle radius.

Conv **Width**

Chord — Enters or calculates the chord Length of a circle segment.

Conv **Height**

Segment Rise — Enters or calculates the rise of a circle segment.

Construction Project Keys

Rebar

Rebar Key — Given stored or entered rebar inset, rebar size, rebar on-center spacing and entered Length and Width values, calculates the following:

<u>Press</u>	<u>Result</u>
1	Total Feet
2	Total Weight
3	Rebar Size
4	Rebar On-Center
5	Rebar Inset
6	Stored Length
7	Stored Width

If you already know your total linear Feet of rebar, you can enter the Length to calculate the total Weight based on the Weight per Foot of the stored rebar size (e.g. ① ②

③ Feet Rebar Rebar).

Conv Rebar

Inset — Stores rebar inset. Default is 3 inches. Rebar inset is the spacing between the rebar and the perimeter of the forms or foundation.

Rebar Size

Rebar Size Key — Stores rebar size. Rebar size can be entered as a number for rebar sizes 3-11, 14, and 18 (e.g., ⑤ **Rebar** for number 5 rebar), or as a decimal or fractional value not exceeding 6 inches in

diameter (e.g., **5** **/** **8** **Rebar** for 5/8 inch bar size). Default is number 5 (5/8").

Conv

Spacing — Stores rebar on-center spacing. Default is 18".

Loads

Loads Key — Calculates number of loads for a given Volume or Length, Width, and Height (Depth) values and stored load size.

Stor **Loads**

Load Size — Stores load size. Load size must be entered as a cubic value (e.g., **8** **Yds** **Yds** **Yds** **Stor** **Loads**). The default size is 8 cubic yards.

Conv **5**

Bags — Calculates number of concrete bags for a given Volume and stored bag size.

Stor **5**

Bag Size — Stores bag size (Volume per bag of concrete). Bag size must be entered as a cubic value (e.g., **0.666667** **Feet** **Feet** **Feet** **Stor** **5**). Default is 0.666667 cubic feet per bag, based on a standard 80 pound bag.

Blocks

Blocks/Bricks — Calculates the number of concrete blocks required

to fill a given Area. This key can also be used for calculating the number of “face” or “paver” bricks by storing a brick size (see **Block Size**).

Stor Blocks

Block Size — Stores the block size. Block size must be entered as a linear value or a square value. The default is 128 square inches block Area and 16 inches block Length.

Note: For bricks, you may also enter a brick size using **Stor Blocks**. For example, when building with standard “face” bricks, store a brick size of 21 square inches (e.g., **2 1 Inch Inch Stor Blocks**) or store 32 square Inches (e.g., **3 2 Inch Inch Stor Blocks**) for “paver” bricks. This is based on Modular U.S. brick size of 3-5/8 inches x 2-1/4 inches x 7-5/8 inches, including 3/8 inch mortar = 4 inches x 2-5/8 inches x 8 inches.

Sq-Up

Square-Up Key — Calculates the “Square-Up” (diagonal) Length given entered Length and Width values.

Drop

Drop Key — Calculates total drop (or fall) over an entered Length given, entered percentage drop, inch per foot drop, or degrees of drop. Continued presses will act as a “constant add” for displaying successive drops.

Conv **8**

Board Feet — Enters or converts cubic values to board feet.

Conv **Circ**

Column/Cone — Calculates the Volume and surface Area of a column and/or cone.

Ftg

Footing — Finds quantity of concrete, based on entered wall Length and stored footing Area.

Stor **Ftg**

Footing Area — Stores footing Area. Footing Area must be entered as a square value (e.g., **2**

6 **4** **Inch** **Inch** **Stor** **Ftg**). The default footing is 264 square inches.

Conv **Length**

Polygon — Calculates full angle, bi-sect angle, side Length, perimeter and Area based on entered radius and number of sides.

Stair Layout Key

Stair

Given Height and/or Length and stored variables, calculates or displays:

Press Result

- 1 Riser Height (**R-HT**)
- 2 Number of Risers (**RSRS**)
- 3 Riser Overage/
Underage (**R+/-**)

- 4 Tread Width (**T-WD**)
- 5 Number of Treads (**TRDS**)
- 6 Tread Overage/
Underage (**T+/-**)
- 7 Stairwell Opening (**OPEN**)
- 8 Stringer Length (**STRG**)
- 9 Angle of Incline (**INCL**)
- 10 Stored or Calculated Run (**RUN**)
- 11 Stored or Calculated Rise (**RISE**)
- 12 Stored Desired Riser Height (**R-HT**)
- 13 Stored Desired Tread Width (**T-WD**)
- 14 Stored Headroom (**HDRM**)
- 15 Stored Floor Thickness (**FLOR**)

Conv **Stair**

Riser Limited —

Calculates *riser Height* and other stair values if you're limited by local code. The calculated riser Height will never exceed the *stored* desired riser Height.

STAIR DEFAULT VALUES

- 7-1/2" Desired Riser Height
- 10" Desired Tread Width
- 10" Floor Thickness
- 6' 8" Headroom

Customizable Stair Settings

Stor 7	Stores Desired Riser Height.
Stor 9	Stores Desired Tread Width.
Stor 8	Stores Floor Thickness.
Conv Stor Stor	
Stor Stor	Sets Headroom.

Miscellaneous Functions

←	Backspace Key
Rcl =	Paperless Tape
Conv Stor	Preference Settings
Conv ÷	(1/x) Reciprocal — Finds the reciprocal of a number (e.g., 8 Conv ÷ 0.125).
Conv ×	Clear All — Returns all stored values to the default settings. (Does not affect Preference Settings.)
Conv —	(+/-) Toggle
Conv +	Pi (π) 3.141593
Conv ◐	Converts between D:M:S and decimal degrees.
Conv %	X² — Squares the value in the display.
Conv ←	($\sqrt{}$) Square Root
Conv /	Exponential Notation ($\times 10^y$)
Conv 0	Total Cost (based on entry of per unit cost).
Stor 0	Weight per Volume — Stores a new Weight per Volume value.

Note: After entering a value and pressing **Stor** **0**, continue pressing the **0** digit key until you've reached the desired Weight per Volume format. To recall your setting, press **Rcl** **0**.

Conv **6**

Tons — Enters or converts to Tons.

Conv **4**

Pounds — Enters or converts to Pounds.

Conv **3**

Metric Tons — Enters or converts to Metric Tons.

Conv **1**

Kilograms — Enters or converts to Kilograms.

M+

Memory +

Conv **M+**

Note: Press **On/C** at any time to exit the Preference Settings.

ENTERING DIMENSIONS

Linear Dimensions

When entering feet-inch values, enter dimensions from largest to smallest — feet before inches, inches before fractions. Enter fractions by entering the numerator (top number), pressing **/** (Fraction Bar key) and then the denominator (bottom number).

Note: If a denominator is not entered, the fractional setting value is used.

*Examples of how linear dimensions are entered (press **On/C** after each entry):*

DIMENSION	KEYSTROKES
5 Yards	5 Yds
5 Feet 1-1/2 Inch	5 Feet 1 Inch 1 / 2
17.5 Meters	1 7 . 5 m

Square and Cubic Dimensions

*Examples of how Square and Cubic dimensions are entered (press **On/C** after each entry):*

DIMENSION	KEYSTROKES
5 Cubic Yards	5 Yds Yds Yds
140 Square Feet	1 3 0 Feet Feet
33 Square Meters	3 3 m m

CONVERSIONS

Linear Conversions

Convert 10 feet 6 Inches to other dimensions, including metric:

KEYSTROKE	DISPLAY
1 0 Feet 6 Inch	10 FEET 6 INCH
Conv Feet	10.5 FEET
Conv Inch	126. INCH

Conv	Yds	3.5 YD
Conv	m	3.200 M
Conv	9	3200.4 MM
Conv	7	320.04 MM

Repeated presses of **Feet or **Inch** will toggle between Feet-Inch-Fractions and Decimal Feet or Inches.*

Square and Cubic Conversions

Convert 14 square feet to square yards:

KEYSTROKE	DISPLAY
1 4 Feet Feet	14 SQ FEET
Conv Yds	1.555556 SQ YD

Convert 12 cubic feet to cubic yards:

KEYSTROKE	DISPLAY
1 2 Feet Feet Feet	12 CU FEET
Conv Yds	0.444444 SQ YD

Weight Conversions

Convert 25 tons to other weights:

KEYSTROKE	DISPLAY
2 5 Conv 6 (tons)	25 Ton
Conv 4 (lbs)	50000. LB
Conv 1 (kg)	22679.62 kG
Conv 3 (met tons)	22.67962 MET Ton

Weight per Volume Conversions

Your calculator has the capability of converting between Weight and Volume. The Weight/Volume ratio is permanently stored by entering the value and pressing **Stor** **0**. The default value is 1.5 tons per cubic yard.

Find the Weight of 15 cubic yards at 1.75 tons per cubic yard, then convert to other Weights:

KEYSTROKE	DISPLAY
1 • 7 5 Stor 0	
	STORED 1.75 Ton Per CU YD

1	5	Yds	Yds	Yds	15 CU YD
Conv	6	(tons)			26.25 Ton
Conv	4	(lbs)			52500. LB
Conv	1	(kg)			23813.6 kG
Conv	3	(met tons)			23.8136 MET Ton

Converting D:M:S

Convert 23° 42' 39" to decimal degrees:

KEYSTROKE	DISPLAY
On/C On/C	0.
2 3 ° 4 2 ' 3 9	DMS 23.42.39
Conv °	23.71°

BASIC MATH OPERATIONS

Your calculator uses standard chaining logic, which simply means that you enter your first value, the operator (**+**, **−**, **×**, **÷**) the second value and then the Equals sign (**=**).

- A. **3** **+** **2** **=** 5.
 B. **3** **−** **2** **=** 1.
 C. **3** **×** **2** **=** 6.
 D. **3** **÷** **2** **=** 1.5

This feature also makes the calculator simple to use for dimensional applications:

Adding and Subtracting Strings of Dimensions

Add the following measurements:

- 6 feet 2-1/2 inches
- 11 feet 5-1/4 inches
- 18.25 inches

Then subtract 2-1/8 inches.

KEYSTROKE	DISPLAY
6 Feet 2 Inch 1 / 2 +	
1 1 Feet 5 Inch 1 / 4 +	
1 8 ° 2 5 Inch =	19 FEET 2 INCH

— 2 Inch 1 / 8 = 18 FEET 11-7/8 INCH

Multiplying Dimensions

Multiply 5 feet 3 inches by 11 Feet 6-1/2 inches:

KEYSTROKE	DISPLAY
------------------	----------------

5 Feet 3 Inch X 11 Feet

6 Inch 1 / 2 = 60.59375 SQ FEET

Dividing Dimensions

Divide 30 feet 4 inches by 7 inches:

KEYSTROKE	DISPLAY
------------------	----------------

3 0 Feet 4 Inch ÷ 7 Inch = 52.

Divide 20 feet 3 inches by 9:

2 0 Feet 3 Inch ÷ 9 = 2 FEET 3 INCH

PERCENTAGE CALCULATIONS

The **%** key can be used for finding a given percent of a number or for working add-on, discount or division percentage calculations. It can be used with any type of number, in any dimension (feet, inch, millimeter, etc.) and any type of convention (non-dimensioned, linear, square or cubic).

Calculating Percentages

Find 18% of 500 feet:

KEYSTROKE	DISPLAY
------------------	----------------

5 0 0 Feet X 1 8 % 90 FEET 0 INCH

Add 10% to 137 square feet:

KEYSTROKE	DISPLAY
------------------	----------------

1 3 7 Feet Feet +

1 0 % 150.7 SQ FEET

Take 20% from 552 feet 6 inches:

KEYSTROKE	DISPLAY
------------------	----------------

5 5 2 Feet 6 Inch —

(2) (0) (%)**442 FEET 0 INCH***Divide 350 cubic yards by 80%:***KEYSTROKE****DISPLAY****(3) (5) (0) [Yds] [Yds] [Yds] [÷] (8) (0) (%)****437.5 CU YD**

MEMORY OPERATION

Whenever the **[M+]** key is pressed, the displayed value will be added to the Memory. Other memory functions:

Drop of a Retaining Wall

You're building a 61 foot 8 inch retaining wall along a driveway that slopes away at 1/4 inch per foot. There are 4 sections, each measuring 15 feet 5 inches in length. What is the proper drop amount for each section? What is the total (accumulated) drop depth at the end of all four sections?

KEYSTROKE

DISPLAY

1. Clear calculator:

On/C **On/C**

0.

2. Enter wall section length:

1 **5** **Feet** **5** **Inch** **Length**

LNTH 15 FEET 5 INCH

3. Enter drop per foot to find the drop per section and the total drop depth at first wall section:

1 **/** **4** **Drop** **Drop**

DROP 0 FEET 3-7/8 INCH

4. Find the total drop depth of second through fourth wall sections:

Drop

DROP 0 FEET 7-11/16 INCH

Drop**DROP 0 FEET 11-9/16 INCH****Drop****DROP 1 FEET 3-7/16 INCH**

*Note: Successive presses of **Drop** will continue to add the drop amount of 3-7/8 Inches to the prior wall section's drop, for an accumulated drop total.*

STAIR CALCULATIONS

The *ConcreteCalc Pro* can calculate the values used in stair building, given entered values for floor-to-floor rise **Height** or run of treads **Length**, based on desired riser height and tread width.

Stairs – Given Rise and Run

You're going to build a stairway that has a floor-to-floor height of 10 feet 1 inch, a run of 12 feet 5 inches, and a desired riser height of 7-1/2 inches (default). Find the stair values:

KEYSTROKE**DISPLAY**

1. Enter rise and run:

On/C **On/C**

0.

1 **0** **Feet** **1** **Inch** **Height**

HGHT 10 FEET 1 INCH

1 **2** **Feet** **5** **Inch** **Length**

LNTH 12 FEET 5 INCH

2. Recall stored 7-1/2 inch desired riser height, then find the stair values:

Rcl 7	R-HT STORED 7-1/2 INCH
Stair	R-HT Δ 7-9/16 INCH*
Stair	RSRS 16.
Stair	R+/- 0 INCH
Stair	T-WD Δ 9-5/16 INCH*
Stair	TRDS 15.
Stair	T+/- 0-1/16 INCH
Stair	OPEN 9 FEET 10-1/4 INCH
Stair	STRG 15 FEET 7-5/16 INCH
Stair	INCL 37.27°

Δ in the display means that the calculated riser Height exceeds the desired (stored) riser height, or the calculated tread width is below the desired (stored) tread width.

Stairs – Given Rise Only

You're building a stairway with a total rise of 9 feet 11 inches. Using the default riser height of 7-1/2 inches and tread width of 10 inches, find the stair values:

KEYSTROKE	DISPLAY
-----------	---------

1. Enter known rise:

On/C On/C	0.
9 Feet 1 1 Inch Height	
	HGHT 9 FEET 11 INCH

2. Recall stored desired stair riser height:

Rcl 7	R-HT STORED 7-1/2 INCH
---------------------	-------------------------------

3. Recall stored desired stair tread width:

Rcl 9	T-WD STORED 10 INCH
---------------------	----------------------------

4. Find stair values:

Stair	R-HT 7-7/16 INCH
Stair	RSRS 16.
Stair	R+/- 0 INCH
Stair	T-WD STORED 10 INCH
Stair	TRDS 15.

Stair	T+/- 0 INCH
Stair	OPEN 10 FEET 1 INCH
Stair	STRG 15 FEET 6-15/16 INCH
Stair	INCL 36.64°

*To calculate stairs given run (length) only:
If you have a value stored in height, it will
be used in the stair calculation. You will
need to clear the value by entering zero into
height (e.g. **0** **Height**).*

Stairs – Riser Limited Function

*Calculate stairs using the Riser Limited
function, if you must limit the riser height to
7-1/2 inches:*

KEYSTROKE	DISPLAY
------------------	----------------

1. Enter rise and run:

On/C	On/C	0.
-------------	-------------	-----------

1	0	Feet	1	Inch	Height	HGHT 10 FEET 1 INCH
----------	----------	-------------	----------	-------------	---------------	----------------------------

1	2	Feet	5	Inch	Length	LNTH 12 FEET 5 INCH
----------	----------	-------------	----------	-------------	---------------	----------------------------

2. Recall stored 7-1/2 inch desired riser
height and find stair values:

Rcl	7	R-HT STORED 7-1/2 INCH
------------	----------	-------------------------------

Conv	Stair	R-HT 7-1/8 INCH
-------------	--------------	------------------------

Stair	RSRS 17.
--------------	-----------------

Stair	R+/- 0-1/8 INCH
--------------	------------------------

Stair	T-WD Δ 9-5/16 INCH*
--------------	--

Stair	TRDS 16.
--------------	-----------------

Stair	T+/- 0 INCH
--------------	--------------------

Stair	OPEN 9 FEET 9-5/8 INCH
--------------	-------------------------------

Stair	STRG 15 FEET 7-5/8 INCH
--------------	--------------------------------

Stair	INCL 37.42°
--------------	--------------------

** Δ in the display means that the calculated riser height
exceeds the desired (stored) riser height, or the calculated
tread width is below the desired (stored) tread width.*

APPENDIX

ACCURACY/ERRORS

Accuracy/Display Capacity – Your calculator has a twelve digit display. This is made up of eight digits (normal display) and four fractional digits. You may enter or calculate values up to 19,999,999.99. Each calculation is carried out internally to twelve digits.

Errors – When an incorrect entry is made, or the answer is beyond the range of the calculator, it will display the word “**ERROR.**” To clear an error condition you must press the **On/C** button once. At this point you must determine what caused the error and re-key the problem.

Error Codes

DISPLAY	ERROR TYPE
OFLO	Overflow (too large)
MATH Error	Divide by 0
DIM Error	Dimension error
ENT Error	Invalid entry error
None	Attempts to calculate stairs without entering rise and run

Auto-Range – If an “overflow” is created because of a calculation with small units that are out of the standard digit range of the display, the answer will be automatically expressed in the next larger units (instead of showing “**ERROR**”) e.g., 20,000,000 mm is shown as 20,000 m. Also applies to inches, feet and yards.

Note: If exponential notation is activated through the preference setting, the value will be shown in scientific notation (e.g., 20 million mm – 2.00000 07 mm).

BATTERY AND AUTO SHUTOFF

Your calculator is powered by a single 3-Volt Lithium CR-2016 battery. This should last approximately 800 hours of actual use (1 year plus for most people). Should the display become very dim or erratic, replace the battery. ***WARNING: Please use caution when disposing of your old batteries as they contain hazardous chemicals.*** Your calculator is designed to shut itself off after about 8-12 minutes of non-use.

Note: Values in memory or shown on the display will be cleared.

Replacing the Battery

While the calculator is off, turn the calculator over and use a #1 Phillips screwdriver to loosen the battery holder screw located near the center at the top. With the screw loosened, pull battery holder out, remove old battery, and slide new battery into holder. The negative side of the battery should be facing up towards the screw when replacing in the holder. Retighten screw using a #1 Phillips screwdriver.

Battery Warnings

- Remove and immediately recycle or dispose of used batteries according to local regulations and keep away from children. Do NOT dispose of batteries in household trash or incinerate.
- Even used batteries may cause severe injury or death.
- Call a local poison control center for treatment information.

- Compatible battery type is CR2016 (3.0 V).
- Non-rechargeable batteries are not to be recharged.
- Do not force discharge, recharge, disassemble, heat above manufacturer's specified temperature rating or incinerate. Doing so may result in injury due to venting, leakage or explosion resulting in chemical burns.
- Ensure the batteries are installed correctly according to polarity (+ and -).
- Do not mix old and new batteries, different brands or types of batteries, such as alkaline, carbon-zinc, or rechargeable batteries.
- Remove and immediately recycle or dispose of batteries from equipment not used for an extended period of time according to local regulations.
- Always completely secure the battery compartment. If the battery compartment does not close securely, stop using the product, remove the batteries, and keep them away from children.

WARNING

- **INGESTION HAZARD:** This product contains a button cell or coin battery.
- **DEATH** or serious injury can occur if ingested.
- A swallowed button cell or coin battery can cause **Internal Chemical Burns** in as little as **2 hours**.
- **KEEP** new and used batteries **OUT OF REACH** of **CHILDREN**.
- **Seek immediate medical attention** if a battery is suspected to be swallowed or inserted inside any part of the body.

DEFAULT SETTINGS

After a *Clear All* (**Conv** **X**), your calculator will return to the following settings:

STORED VALUES	DEFAULT VALUE
Desired Riser Height	7-1/2 INCH

REPAIR AND RETURN

WARRANTY, REPAIR AND RETURN INFORMATION

Return Guidelines

1. Please read the Warranty in this User's Guide to determine if your Calculated Industries product remains under warranty before calling or returning any device for evaluation or repairs.
2. If your product won't turn on, check the battery as outlined in the User's Guide.
3. If you need more assistance, please go to the website listed below.

www.calculated.com/warranty

WARRANTY

Warranty Repair Service

Calculated Industries ("CI") warrants this product against defects in materials and workmanship for a period of one (1) year from the date of original consumer purchase in the U.S. If a defect exists during the warranty period, CI at its option will either repair (using new or remanufactured parts) or replace (with a new or remanufactured calculator) the product at no charge.

THE WARRANTY WILL NOT APPLY TO THE PRODUCT IF IT HAS BEEN DAMAGED BY MISUSE, ALTERATION, ACCIDENT, IMPROPER HANDLING OR OPERATION, OR IF UNAUTHORIZED REPAIRS ARE ATTEMPTED OR MADE. SOME EXAMPLES OF DAMAGES NOT COVERED BY WARRANTY INCLUDE, BUT ARE NOT LIMITED TO, BATTERY LEAKAGE, BENDING, A BLACK "INK SPOT" OR VISIBLE CRACKING OF THE LCD, WHICH ARE PRESUMED TO BE DAMAGES RESULTING FROM MISUSE OR ABUSE.

To obtain warranty service in the U.S., please go to the website.

www.calculated.com/warranty

Non-Warranty Repair Service

Non-warranty repair covers service beyond the warranty period, or service requested due to damage resulting from misuse or abuse.

Contact Calculated Industries at the website listed below to obtain current product repair information and charges.
